

Ensuring Safety, Reliability and Compliance

Perimeter-based defenses and threat detection technologies are not enough to defend connected cars against modern cyber attacks. Infotainment, powertrain, autonomous driving, safety, driver assistance, body electronics, navigation, communications, and Internet of Things (IoT) edge devices are vulnerable due to a lack of strong cryptographic controls, including: multi-factor authentication, secure boot, secure update, and secure, encrypted communications.

Automotive electronics manufacturers and automobile manufacturers must ensure compliance with cybersecurity standards such as NIST 800-53, Revision 4, IEC 62443-3-3, and FIPS 140-2 as well as industry standards such as AUTOSAR (AUTomotive Open System ARchitecture). Keeping up with these standards as well as emerging standards from the Industrial Internet Consortium (IIC) and Industrie 4.0 can be challenging. New regulations such as GDPR in Europe raise the stakes for non-compliance to more than €20 million per incident. Older protocols such as CAN bus can be difficult to secure.

In the automotive industry, risk is measured in terms of safety and reliability of the systems. While data

privacy is important, physical human safety and system uptime drive the security needs of connected cars.

Mocana's Proven Cybersecurity Solution

Used by more than 200 OEMs to protect more than 100 million devices, Mocana's IoT Security Platform is a FIPS 140-2 validated embedded cybersecurity software solution that ensures device trustworthiness and secure communications by giving industrial automation manufacturers, OEMs and critical infrastructure operators an easy way to:

- Harden electronic control units and controllers with multi-factor authentication using X.509 certificates and trust chaining
- Secure the boot process to validate the firmware, OS and applications
- Enable secure, cryptographically-signed over-the-air (OTA) and over-the-web (OTW) firmware updates
- Integrate hardware or software-based roots of trust such as TPM, SGX, TrustZone, HSMs, SIMs, and MIMs
- Replace open source crypto software such as OpenSSL.

For more information on Mocana's comprehensive IoT Security Platform and how it can help you secure your critical infrastructure, visit our website at mocana.com or send us an email via sales@mocana.com.
