

Mocana TrustPoint™

The Most Comprehensive IoT Endpoint Security System from Device to Cloud

Mocana's Cybersecurity System goes beyond traditional perimeter-based security approaches by making devices trustworthy and enabling secure device-to-cloud communications using Mocana TrustPoint™ IoT endpoint protection software.

Features:

- › FIPS 140-2 cryptographic trust engine
- › Multi-vendor support
- › Trust abstraction and APIs
- › Device hardening

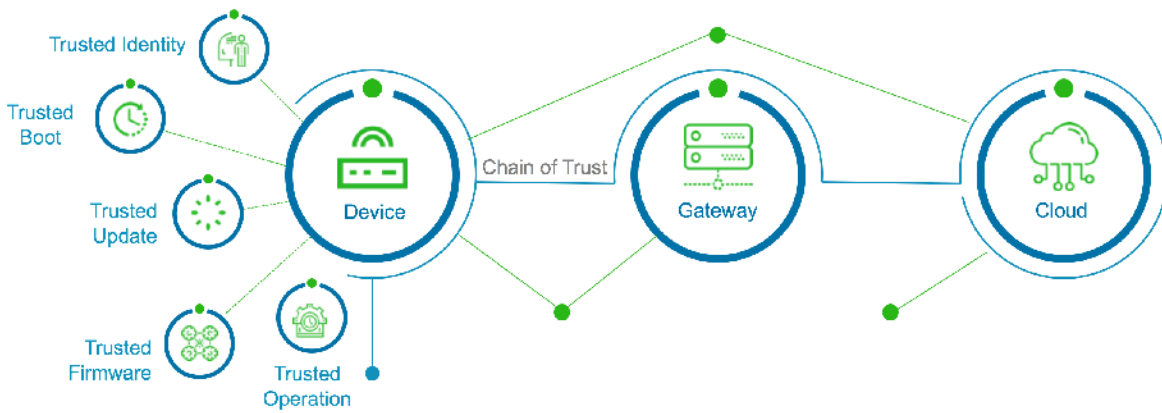

Benefits:

- › Ensures device trustworthiness
- › Simplifies and speeds integration and compliance
- › Easy application integration
- › Device-to-cloud security

Mocana TrustPoint IoT endpoint security software can be implemented in both commercial and military applications.

- › **Compliant:** Our crypto engine is FIPS 140-2 Level 1 validated and contains no open source code. Mocana facilitates compliance with IEC 62443-3-3 and NIST 800-53. Mocana meets with the Industrial Internet Consortium Endpoint Security Best Practices (ESBP) guidance.
- › **Faster Development and Provisioning:** It is pre-integrated with more than 70 chipsets and 30 RTOS. Mocana's easy to use APIs and trust abstraction layer make it easy to integrate Mocana TrustPoint™ with embedded applications and hardware.
- › **Lower Cost:** Mocana TrustPoint™ provides a Cyber Development Framework and system that speeds development and reduces development and management costs.

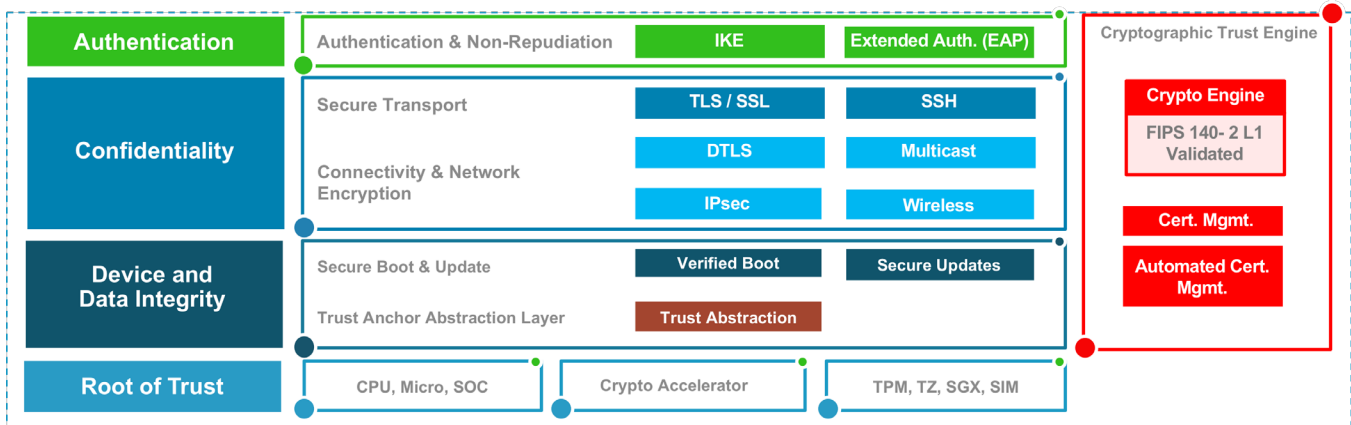

Mocana provides an IoT Security System to protect Endpoints, Gateways and Cloud infrastructure while creating a Chain of Trust between the devices in critical infrastructure.

Key features of Mocana TrustPoint™:

- › Lightweight footprint for resource-constrained devices
- › Support for advanced cryptographic functions
- › Integrated with 70+ chipsets and 30 RTOSes
- › Scalable device enrollment and certificate management
- › Secure update service
- › Secure transport and cloud integrations

Mocana’s Cyber Development Framework makes it easy for developers to implement strong security into IoT devices to ensure device and data integrity, authentication, confidentiality and non-repudiation.
